

TOLERANT BLOCK SIZE RANGE

This enables a wide range of cable or pipe diameters to be accommodated by a compact range of tolerant block sizes.

Hawke tolerant blocks have five sealing faces that are displaced by the sealing process. This results in a tolerance of up to 4mm for cable diameters.

TOTAL INSPECTABILITY

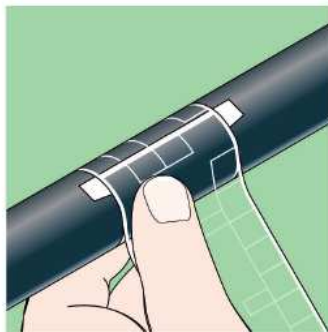

The Hawke colour coded block system provides total inspectability of the transit installation even after assembly has been completed.

On each of the two exposed block faces minimum and maximum diameters are clearly marked. This indicates the specific sealing range of the block size.

HAWKE MEASURING TAPE

The tape enables cable diameters to be accurately measured thus ensuring that the correct size of block is selected for the cable diameter.

The gauge is wrapped around the cable this then details the correct block to select for that cable together with the colour coding.
